

### INTEGRATED STARTER SYSTEM

The Integrated Starter System provides a simple and affordable way for homeowners to harvest rainwater for 40%–60% of daily water use including toilet flushing, washing clothes, lawn and garden, and general cleaning. To maintain a seamless supply for these uses, the system is integrated with your city or well water through an electronic control device that maintains a minimum water level during dry spells.

- 1 RainKeeper Self-cleaning Filter
- 2 Calmed Inlet
- 3 Floating Intake
- 4 Overflow Siphon
- 5 Infiltration
- 6 Integration Controller
- 7 Electronic Pump Control
- 8 Pump
- 9 Pressure Tank
- 10 Rainwater for washer, toilets, lawn hydrants, etc.
